

Why choose DB Primary for your remote learning provisions?

We have over 15 years' experience of providing EdTech solutions to help support teaching in schools across the globe – so we know what works and what optimises learning both in and out of the classroom.

DB Primary is the perfect solution for providing remote learning to primary aged pupils.

Upload and embed teaching videos

The ability to host/embed videos and links for online lessons is paramount. Children like to engage with teacher-led learning.

You can upload both external videos and content produced by your own teachers. This will allow children to be taught by their own teacher, making the transition to remote learning easier.

Curriculum-led content, interactive activities and pathways

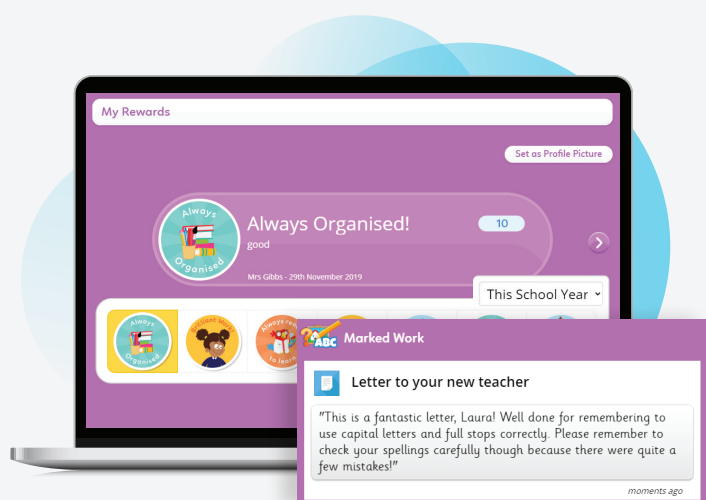

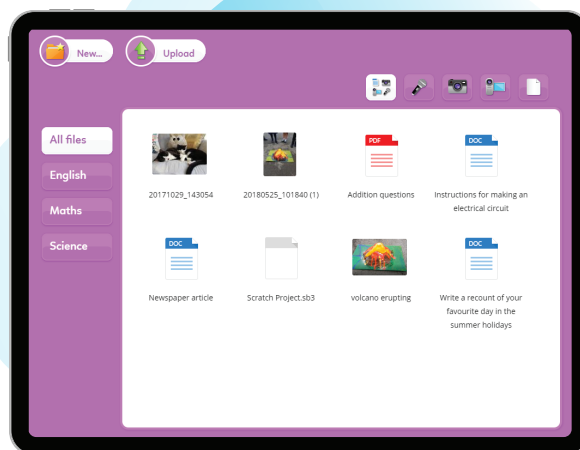

DB Primary comes complete with a wide range of interactive curriculum resources which pupils can complete at home, without teacher intervention. This will help save teacher time and ensure learning can continue even if teacher resource is limited.

Teachers can set work from a library of activities and also arrange these in learning pathway sequences, with the ability to schedule these and add pre-set deadlines. This also facilitates summer learning if this is required.

Let children share their work with you

DB Primary enables your children to upload a variety of work including; written work, pictures and videos. This makes work engaging and gives a purpose for completing tasks. The upload process is age appropriate and easy for children to complete themselves.

Give feedback and recognition

Teachers can review work, give feedback and give rewards for work completed.

Just like adults, children yearn for praise and recognition. Being able to share work they have completed, knowing it will be looked at and marked by their teacher, is key to keeping them motivated while at home.

Maintain school community and communication with peers

DB offers a range of communication channels which allow pupils and teachers to remain connected to their school community.

Our in-built safe email system allows pupils to communicate with people across the school in a safe environment.

Complete with blogs and forums children can start conversations about different topics, share pieces of work and celebrate others' work. Fully moderated, it provides children with the foundations of online safety and teaches them how to operate online in a respectful way to their peers.

This type of practical hands on experience will also help solidify the foundations for the online safety strand of the incoming Relationships Education guidelines.

Ease of use and ongoing support

DB Primary is quick to set up and easy to use. Both teachers and pupils will feel confident using the platform and with full support included in your annual fee, our team are always on hand to help and guide your staff through the product.
