

Cloud Platform Security Assessment

Managing Cloud Security Posture

Reduce Cloud-Related Security Incidents

Companies need to improve security across cloud accounts and better employ industry leading practices including the Center for Internet Security (CIS) benchmarks.

New Era delivers automated services backed by a skilled team with cross-disciplinary experience in cloud platform information security and IT infrastructure.

// Nearly all successful attacks on cloud services are a result of customer misconfiguration, mismanagement and mistakes. The increasing adoption of cloud services, combined with the increasing number of platform services and a lack of cloud skills (including security), have left enterprise information and workloads exposed.

Gartner

How New Era Can Help

Improve Cloud Security Controls

- **SCAN:** Automated API-based extraction and analysis of configuration information
- **ASSESS:** Virtual consulting session to review and prioritize findings and recommendations
- **CLOUD SECURITY CONTROLS ASSURANCE:** On-going cloud security posture management
- **REMEDiate:** Automated and manual remediation of security issues
