Cybersecurity Maturity Model Certification (CMMC) Advisory Services

Is your organization prepared for CMMC 2.0 compliance?

Our CMMC 2.0 Compliance Assessment service helps organizations meet the latest cybersecurity standards mandated by the Department of Defense (DoD). With the finalized CMMC 2.0 requirements expected in early 2025, this service prepares businesses to achieve compliance, reduce risks, and maintain eligibility for defense contracts.

The Challenge:
A study by Merrill Research found that over 85% of contractors fail to meet the minimum acceptable score of 70 on DFARS and CMMC assessments, highlighting widespread gaps in cybersecurity maturity across the defense supply chain.

Why Choose SecureBlu?
From initial consultation to remediation and ongoing advisory services, SecureBlu's solution covers all aspects of CMMC 2.0 compliance. Our service can provide a comprehensive approach no matter where you are in your CMMC compliance journey.
