

## Structured Cabling Solutions

Cable infrastructure is the foundation of a modern information system; designed to handle the current volume requirements, yet sufficiently flexible to accommodate the inevitable changes from enterprise restructuring. As voice, video and data have converged, there is little tolerance for faulty data cabling. In order to ensure a network will run properly, the cable must be installed professionally, tested, and labeled. By adhering to these principles, New Era Technology has been able to successfully build its Cabling Division.

Our services are run over a combination of different fiber optic and copper cabling, including: Multi-Mode fiber optic cable OM1, OM3, and OM4, Single-Mode fiber optic cable, Category 5E, 6, and 6A copper cable, coaxial, and stranded gauge wire.

This fully equipped division provides consultation for IT directors, consultants, and architects and is the vendor of choice for many schools, municipal courts, and state agencies in New Jersey.

New Era's Cabling Division works with several high-profile clients, including the New Jersey State Police, the Meadowlands Complex, and Monmouth Park.

### Benefits

- New Era's Cabling Manager has over 20 years of experience
- Experienced technicians from IBEW locals 16, 153, 164, 212, 269, 305, 351, 369, 400, 456, 481, 531, 668, 855, 873
