

Patient Safety

Reduce risk to focus on patients while creating positive outcomes.

Creating and delivering safe patient environments is a critical function in healthcare. By anticipating and preventing adverse situations versus reacting to them, it leads to positive care outcomes.

New Era Technology can help facilitate situational awareness by monitoring medical equipment, bed and patient risk status, and delivering that information directly to caregivers. Designed to protect all your staff and patients, New Era uses visitor management, locating services, and real-time alerts to secure the whole facility.

Patient Safety Solutions

- Visitor Management
- Mass Notification
- Infant Security Protection
- Staff and Patient Locating
- Wander Management
