

# Cybersecurity Maturity Model Certification: Advisory Services

## Is your organization prepared for CMMC compliance?

With Cybersecurity Maturity Model Certification (CMMC) 2.0, over 95% of defense contractors and their supply chains handling Controlled Unclassified Information (CUI) will require third-party assessments to comply with NIST SP 800-171 standards. Additionally, companies dealing with Federal Contract Information (FCI) must conduct annual self-assessments to verify their compliance.

### The Challenge:

- According to a Merrill Research study, over 85% of contractors fail to meet the minimum acceptable score of 70 on the Defense Federal Acquisition Regulation Supplement (DFARS) and CMMC requirements.
- CMMC mandates identifying and remediating security gaps within 30 days.
- Continuous evolution of cyber threats and changes in your environment necessitate regular control and compliance assessments.

### Why Choose SecureBlu?

If your organization handles Controlled Unclassified Information (CUI) or Federal Contract Information (FCI), SecureBlu can help you improve your security posture and prepare for CMMC compliance. Our expertise ensures you meet the necessary standards and remain vigilant against evolving cyber threats.

## How SecureBlu Can Help:

Our team at SecureBlu brings deep security and government experience to guide you through the CMMC compliance process, whether for annual self-assessments or in-depth third-party attestations.

### Our services include:

- **Evaluation** – Assess your cybersecurity posture and controls against NIST frameworks.
- **Gap Identification** – Identify security gaps in your environment.
- **Evidence Mapping** – Map your existing evidence to the required CMMC requirements.
- **Advisory** – Advise on evidence creation to support compliance.
- **Remediation Support** – Assist in remediating identified security gaps.
- **Mentoring** – Mentor your security teams to enhance their capabilities.
