

Advancing Security in Microsoft 365

New Era Technology offers a multi-point security inspection for your Microsoft 365 tenant to ensure your organization is running smoothly and securely.

Improve Your Microsoft 365 Security Posture

Microsoft 365 (M365) is targeted by hackers due to its popularity and the amount of business data it contains. Microsoft, by default, leaves the security settings open for company security teams to configure as needed. Organizations of all sizes have not fully capitalized on the available Microsoft security tools. In addition, the evolving threat landscape and platform upgrades requires the regular review and tuning of M365 security controls.

As a Microsoft Tier 1 Cloud Solution Provider, New Era helps companies using M365 to improve their security posture. Using our extensive experience and leading standards such as the Center for Internet Security (CIS) and National Institute of Standards and Technology (NIST), our security experts can assess, configure, deploy, educate, and manage your M365 environment.

Companies of all sizes benefit from New Era's SecureBlu engineering expertise as well as an annual check and balance to validate that you have optimized your Microsoft 365 security posture.

Benefits:
