

Cloud Information Security Assessment

Hybrid work and digital business processes in the cloud have introduced new risks. Learn how you can protect your digital assets by identifying and prioritizing your cloud security posture.

Protecting Your Digital Assets

According to Gartner, hybrid work and digital business processes in the cloud have introduced new risks. At the same time, sophisticated ransomware, attacks on the digital supply chain and deeply embedded vulnerabilities have exposed technology gaps and skills shortages. To address the risks, CISOs need to transition their roles from technologists who prevent breaches to corporate strategists who manage cyber risk.

What do Security Leaders Need?

- Ability to drive business initiatives through secure DevOps
- Rationalization of cloud and data center security services
- Immediate visibility into cloud IT risk
- Cloud-specific Disaster Recovery preparation
- Increased agility and responsiveness to manage application changes

99%

Through 2023, at least 99% of cloud security failures will be the customer's fault. A single mistake can immediately expose thousands of systems or large amounts of sensitive data. Security and risk management leaders should invest in cloud security posture management processes and tools to proactively

– Gartner 'State of Cloud' Report

New Era's Expertise

New Era Technology delivers a skilled team with cross-disciplinary experience in cloud platform information security and IT infrastructure.

Services Include:

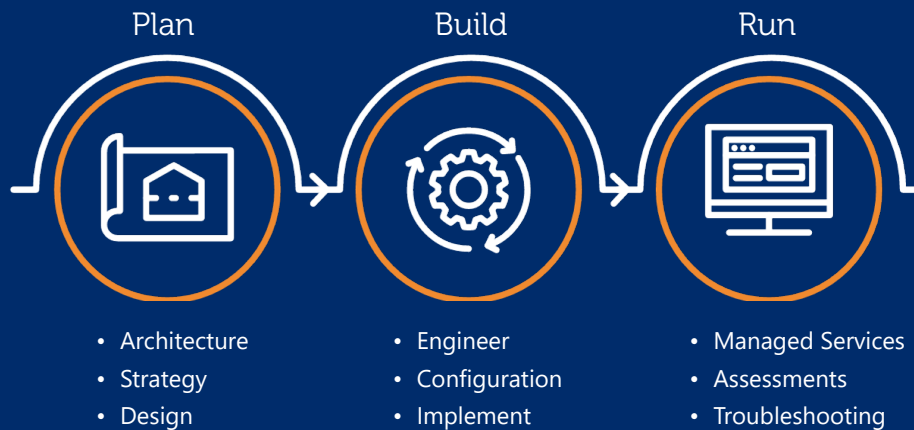

- Online cloud platform admin console security vulnerability review
- Network and host-based control assessment
- CLI-based extraction of configuration information
- External (Internet) vulnerability scan
- API security evaluation
- Automated, internal cloud security analysis conducted via Prisma from Palo Alto

Find Your Path Forward

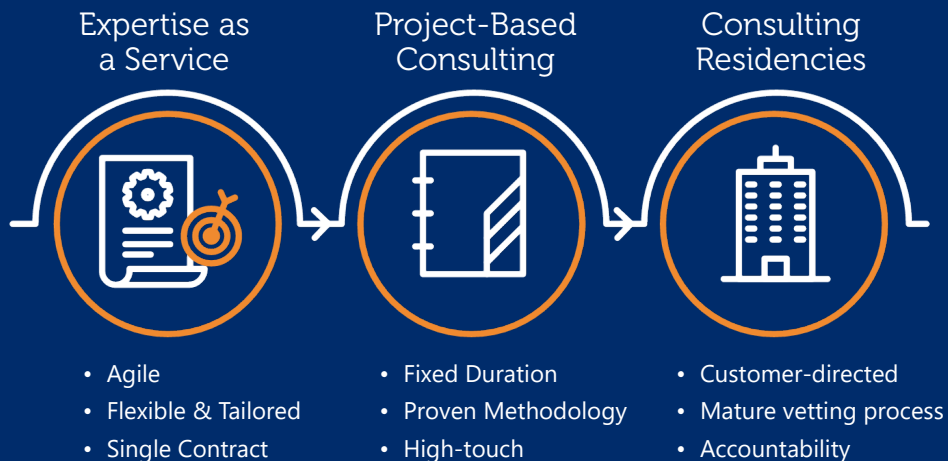

New Era Technology solves enterprise challenges relating to:

- **Identify:** Implementing technologies and best practices of Zero Trust across Identities, Endpoints, Applications, Data, Infrastructures, and Network.
- **Connect:** Aligning modern and traditional infrastructures and network technologies and providing critical visibility for hybrid management and success.
- **Protect:** Accelerating the secure adoption of software, infrastructure, and platform as-a-service technologies while protecting trusted pathways between cloud providers and on-premises resources.
