High-Performance Sound System Installed at Purdue University

Purdue University's Football Performance Complex needed a high-performance sound system for its expansive weight room and locker rooms, as well as meeting rooms on the second and third floors of the building.

As noted in a project profile by Fulcrum Acoustic, the weight room required a powerful, wide beamwidth sound system that could integrate with the center-hung video display. The locker room required loudspeakers with high output, low-frequency impact, and solid musicality.

New Era Technology was the integrator selected to provide and install the equipment, which included all configuration, programming, testing, and commissioning of the systems deployed in the 20,900 square-foot weight room and the 11,600 square foot locker room.
