

Mass Notification

Deliver messages in a timely manner to ensure safety and security of employees, students, and facilities.

Protect your assets and deliver critical messages by enabling security personnel and the users at your organization to interact quickly and efficiently to address emergencies or internal notifications. New Era Technology's Mass Notification solutions are customizable, comprehensive, and are easily integrated with systems such as building automation, video surveillance, access control, and fire alarm.

Use cases for Mass Notification can include workplace violence, inclement weather, building conditions, employee alerts, and more. Using a Mass Notification system, organizations can automatically notify proper authorities in an emergency and effectively notify specific groups in a building site.

Compared to standalone systems, Mass Notification systems are more efficient and cost-effective for distributing information to a large number of people. Compliant with NFPA 72 and NFPA 3000, New Era takes a holistic approach to help ensure the utmost safety measures for your organization.
