Transportation Management Systems Consulting

DATA SHEET

Today's global transportation leaders require real-time visibility to where freight is and when it will deliver along with any exceptions that might occur along the way. Rising freight costs, lack of visibility (to both incoming shipments and shipments in transit), unpredictable fuel costs and tightening carrier capacity make transportation planning a headache that many organizations don't have the resources to endure.

New Era Technology caters to the logistics industry by providing vital services to help eliminate downtime, reduce expenses, visualize key data to operate efficiently among various teams within the organization. New Era has a wide range of industry domain experience with its onsite, onshore, offshore, and nearshore presence to provide the most cost-effective and custom solutions with specific service requirements for our customers.

Offering Scale, Flexibility, Availability, & Cost-Containment

Having development and support facilities in the US, Mexico, APAC, and EU. New Era has years of experience in serving transportation and logistics customers in building custom applications, modernizing technology and application platforms, and integrating industry-standard third-party applications. Our matured delivery model will help reduce the following:

- Cultural and Communication Challenges through the onsite team consists of an engagement manager, and technical and functional leads.
